Jean-François Boullier

Graduated in 1999 from the Scientific University of Tours with a master, he has work for public organizations on project like local card for public services payment based on no-touch card (payment of school restoration, nursing). He also works around Internet technology (web site, e-administrations...)

In charge of Information Technology department of the CAP, Jean-François manage many projects like the metropolitan network.

With an Informatics' formation (engineer degree), his role is to be a support for all the department of CAP like economic development or new services for peoples living in the CAP.

Laboratori Guglielmo Marconi

Laboratori Guglielmo Marconi (LABS) is an engineering company which provides highly skilled solutions in the design, development and implementation of wire-line and wireless communication systems, networks and solutions. LABS designs and follows the implementation of building, campus, and wide area networks, relying both on fibre and wireless technologies (WiFi, TETRA, point-to-point and point-to-multipoint links). Applications cover data, voice, CATV, video surveillance, and global connectivity.

LABS has developed its own proprietary solutions for remote network monitoring and management, which detects any critical events on the network before they produce noticeable effects for end-users. This software application is flexible and fully programmable and yields real-time, dynamic snapshots of the status of all network objects. LABS has also played an active role in smart card and digital signature applications, Internet technologies for public administrations (e-government), and ICT applications for the transportation sector.
